

Kossi Edem Emile D. Aholou

AI Developer | Electrical Engineer building practical AI tools

Edmonton, Alberta, Canada • aholou.emile09@gmail.com • linkedin.com/in/kossi-edem-emile-d-aholou • oltavia.com
Permanent resident of Canada • Bilingual English and French • Valid driver's licence • Open to relocation

PROFESSIONAL SUMMARY

Electrical engineer with a degree assessed by WES as equal to a bachelor's and master's, and 5+ years of project management in energy and construction, now building AI tools for small businesses. Founded Xodyia, where I built an assistant that answers customers only from a company's own documents and a prospecting CRM that follows Canada's anti-spam law. Also built CodeGraft, a learning platform with an AI tutor on the Claude API. Comfortable taking a tool from a real business problem to a tested, working version. Currently following a structured machine learning plan: Python and data first, then modelling and deployment.

CORE COMPETENCIES

Programming: Python, JavaScript, TypeScript, SQL

Web and back end: Node.js, React, Next.js, Supabase, SQLite, REST APIs

AI: Claude API integration, prompt guardrails, rate limiting, document search (BM25), testing answers against a question set

Tools: Git, GitHub, Vercel, Netlify

Currently learning: NumPy, pandas, scikit-learn

SELECTED PROJECTS

Document-based answering assistant | Xodyia

2026

JavaScript, BM25

- Built a search engine in plain JavaScript that answers customer questions only from a business's own documents, in French and English
- Set topics the assistant must never answer, such as health questions, so the conversation goes to a person instead
- Wrote 75 test questions, including trick questions, and fixed a flaw that let unrelated questions get a wrong answer

CodeGraft | Online learning platform

2026

Next.js, React, Supabase, Claude API • codecraft.vercel.app

- Built a machine learning course path with exercises and quizzes, plus a 180-question bilingual PMP practice exam
- Added an AI tutor on the Claude API that guides learners through their projects instead of doing the work for them, with a limit on requests
- Set up user accounts, progress tracking and password reset with Supabase

Prospecting CRM | Xodyia

2026

Node.js, SQLite, Python

- Built a CRM that blocks any contact without a valid legal basis under Canada's anti-spam law (CASL), and tracks consent expiry and opt-outs
- Added Excel list import, duplicate detection and automatic backups

PROFESSIONAL EXPERIENCE

Founder | Xodyia

September 2026 – Present

Edmonton, Alberta

- Started an AI and automation company for small businesses and built three bilingual product demos: appointment booking, document-based answers, follow-up on customer enquiries
- Wrote the sales strategy and prospecting plan, and scoped the first client pilots

Development Agent | Réseau Santé Alberta

October 2024 – Present

Edmonton, Alberta

- Coordinate program schedules, stakeholder communication and progress reporting across multiple communities in central Alberta
- Built simple tracking tools (spreadsheets, logs, status updates) to follow activities and results

Construction Project Manager | Desco Architectural Firm

January 2023 – April 2024

Lomé, Togo

- Managed construction projects from planning to closeout, including budgets, schedules, risks and monthly client reports, and reduced budget overruns by 15%

Engineering Manager, Energy Transport & Distribution | CH2000

January 2021 – December 2022

Conglomerate Horizon 2000 • Lomé, Togo

- Led medium and low-voltage power distribution projects with teams of 20 to 30 people, and cut completion times by at least 15% by streamlining scheduling and reporting

Project Coordinator, Solar Energy | ARESS Togo, solar subsidiary of CH2000

January 2019 – December 2020

Lomé, Togo

- Coordinated solar energy projects, prepared cost estimates and advised management on technical questions

EDUCATION & PROFESSIONAL DEVELOPMENT

Engineering Diploma, Electrical Engineering

2018

Institut de Formation Technique Supérieure (IFTS), Togo • WES: equivalent to a Canadian bachelor's and master's degree

Coursework, B.Sc. Computing and Information Systems

November 2025 – June 2026

Athabasca University • 6 courses: Python, data structures, algorithms, linear algebra

36-Hour PMP Exam Preparation Course

Completed

Coursework aligned with PMI standards • Working toward the PMP designation
